

A scatter plot showing the relationship between the Estimated Expected Score (X-axis) and the Observed Score (Y-axis). The X-axis ranges from 10 to 50, and the Y-axis ranges from 10 to 50. The data points are represented by black dots. The plot shows a strong positive correlation, with points clustered along the diagonal line where the estimated score equals the observed score. There is a slight overestimation for scores between 30 and 40, and a slight underestimation for scores above 40.
