

A scatter plot showing the relationship between 'Raw Score' (x-axis) and 'Adjusted Score' (y-axis). The x-axis ranges from 0 to 35 with major ticks at 10, 20, and 30. The y-axis ranges from 0 to 35 with major ticks at 10, 20, and 30. The data points are black dots, forming a dense, upward-sloping band from approximately (5, 5) to (35, 35). There is a slight negative correlation at the high end of the scores, where raw scores are above 30 but adjusted scores are slightly lower.
