

A scatter plot showing the relationship between 'Raw Score' (x-axis) and 'Adjusted Score' (y-axis). The x-axis ranges from 0 to 40 with major ticks at 10, 20, 30, and 40. The y-axis ranges from 0 to 40 with major ticks at 10, 20, 30, and 40. The data points are black dots, forming a dense, upward-sloping band from the bottom-left to the top-right. The points are most concentrated between raw scores of 10 and 35, and adjusted scores of 10 and 35. There is a slight increase in the spread of points as the raw score increases, particularly above 20. The overall trend is a strong positive linear correlation.
