

A scatter plot showing the relationship between 'Raw Score' (x-axis) and 'Adjusted Score' (y-axis). The x-axis ranges from 0 to 18, and the y-axis ranges from 0 to 18. The plot features a light gray background with a white grid. Data points are represented by small black dots. Most points follow a strong positive linear trend, starting from the bottom-left and moving towards the top-right. There are several vertical clusters of points, particularly between raw scores of 8 and 15, indicating that multiple adjusted scores were calculated for the same raw score. A few points are outliers, such as one at approximately (5, 16) and another at (16, 10).
