

The scatter plot displays the frequency of raw scores for 100 items. The x-axis, labeled 'Raw Score', ranges from 0 to 10. The y-axis represents the frequency, with a maximum of 100. The data points are clustered into vertical groups, indicating the frequency of each score. The distribution is skewed to the left, with the highest frequency of items (around 100) occurring at a raw score of approximately 9.5. The frequency decreases as the raw score decreases, with the lowest frequency (around 10) occurring at a raw score of approximately 0.5.
