

A scatter plot showing the relationship between the true theta values (x-axis) and the predicted theta values (y-axis). The x-axis is labeled 'True.Theta' and ranges from approximately -3 to 3. The y-axis is labeled 'Predicted.Theta' and ranges from approximately -3 to 3. The data points are represented by black dots. The plot shows a strong positive correlation, with most points clustered along the diagonal line where predicted values equal true values. There is a slight over-prediction for true values greater than 1 and under-prediction for true values less than -1.
