

A scatter plot showing the relationship between 'True.Theta' (x-axis) and 'Predicted.Theta' (y-axis) for the 'theta' variable. The plot features a dense cluster of points along the diagonal line $y = x$, indicating high predictive accuracy. The axes range from approximately -3 to 3, with major grid lines at intervals of 1. There are several outliers, particularly in the upper right quadrant where predicted values are higher than true values, and in the lower left quadrant.
