

The scatter plot displays the relationship between the Raw Score (X-axis) and the number of correct answers (Y-axis). The X-axis ranges from 0 to 10, and the Y-axis ranges from 0 to 10. The data points show a positive correlation, with a dense cluster of points along the diagonal line where the number of correct answers equals the raw score. There are also several points scattered above and below this diagonal line, particularly at higher raw scores.
