

The scatter plot displays the relationship between 'Raw Score' (x-axis) and the number of students (y-axis). The x-axis is labeled 'Raw Score' and has major tick marks at 2.5, 5.0, and 7.5. The y-axis represents the frequency of students, with a maximum value of 100. The data points are represented by black dots, showing a strong positive correlation between the raw score and the number of students. The highest frequency of students is observed at a raw score of 10, with approximately 100 students. The frequency decreases as the raw score decreases, with the lowest frequency of approximately 10 students at a raw score of 0.
