

A scatter plot showing the relationship between 'Raw Score' (x-axis) and 'Adjusted Score' (y-axis). The x-axis ranges from 0 to 35, and the y-axis ranges from 0 to 35. The data points are black dots. A strong positive linear trend is visible, with a dense cluster of points along the diagonal line where Raw Score equals Adjusted Score. There are several outliers, particularly at the lower end of the score range (below 10) and a few points at the higher end (above 25).
